Aggregating Data Using Group Functions

Objectives

- After completing this lesson, you should be able to do the following:
 - Identify the available group functions
 - Describe the use of group functions
 - Group data by using the GROUP BY clause
 - Include or exclude grouped rows by using the HAVING clause

What Are Group Functions?

•Group functions operate on sets of rows to give one result per group.

EMPLOYEES

| DEPARTMENT_ID | SALARY | | |
|---------------|--------|-------------------|-------------|

Types of Group Functions

- AVG
- COUNT
- MAX
- -MIN
- STDDEV
- SUM
- VARIANCE

Group Functions: Syntax

```
SELECT [column,] group_function(column), ...

FROM table
[WHERE condition]
[GROUP BY column]
[ORDER BY column];
```

Using the AVG and SUM Functions

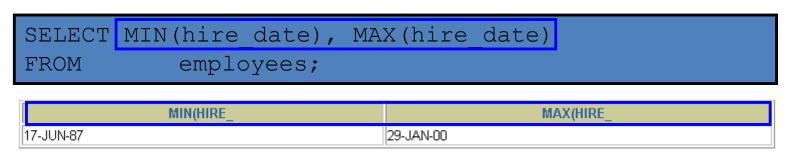

•You can use AVG and SUM for numeric data.

```
SELECT AVG(salary), MAX(salary),
MIN(salary), SUM(salary)
FROM employees
WHERE job_id LIKE '%REP%';
```

| AVG(SALARY) | MAX(SALARY) | MIN(SALARY) | SUM(SALARY) |
|-------------|-------------|-------------|-------------|
| 8150 | 11000 | 6000 | 32600 |

Using the MIN and MAX Functions

•You can use MIN and MAX for numeric, character, and date data types.

Using the COUNT Function

•COUNT(*) returns the number of rows in SELECT COUNT(*)
FROM employees
WHERE department_id = 50;

```
COUNT(*)
5
```

SELECT COUNT(commission_pct)

FROM employees
WHERE department_id = 80;

COUNT(COMMISSION_PCT)

10003 WILLI HOLL-HALL VALUES TOLLLIE $\Box X \wp \bot$.

Using the DISTINCT Keyword

- COUNT (DISTINCT expr) returns the number of distinct non-null values of the expr.
- To display the number of distinct department values in the EMPLOYEES table:

```
SELECT COUNT(DISTINCT department_id)
FROM employees;
```

COUNT(DISTINCTDEPARTMENT_ID)

7

Group Functions and Null Values

Group functions ignore null values in the

```
SELECT AVG(commission_pct)
FROM employees;

AVG(COMMISSION_PCT)

.2125
```

SELECT AVG(NVL(commission_pct, 0))
FROM employees;

AVG(NVL(commission_pct,0))

AVG(NVL(commission_pct,0))

.0425

Creating Groups of Data: GROUP BY Clause Syntax

```
SELECT column, group_function(column)

FROM table
[WHERE condition]

[GROUP BY group_by_expression]

[ORDER BY column];
```

•You can divide rows in a table into smaller groups by using the GROUP BY clause.

Using the GROUP BY Clause

•All columns in the SELECT list that are not in group functions must be in the GROUP BY

```
Clause.
SELECT department_id, AVG(salary)
FROM employees
GROUP BY department_id;
```

| DEPARTMENT_ID | AVG(SALARY) |
|---------------|-------------|
| 10 | 4400 |
| 20 | 9500 |
| 50 | 3500 |
| 60 | 6400 |
| 80 | 10033.3333 |
| 90 | 19333.3333 |
| 110 | 10150 |
| | 7000 |

Using the GROUP BY Clause

•The GROUP BY column does not have to be in the SELECT list.

```
SELECT AVG(salary)
FROM employees
GROUP BY department_id;
```

| AVG(SALARY) | |
|-------------|------------|
| | 4400 |
| | 9500 |
| | 3500 |
| | 6400 |

Grouping by More Than One Column

Using the GROUP BY Clause on Multiple Columns

```
SELECT department_id dept_id, job_id, SUM(salary)
FROM employees
GROUP BY department id, job id;
```

| DEPT_ID | JOB_ID | SUM(SALARY) |
|---------|------------|-------------|
| 10 | AD_ASST | 4400 |
| 20 | MK_MAN | 13000 |
| 20 | MK_REP | 6000 |
| 50 | ST_CLERK | 11700 |

| 90 | AD_PRES | 24000 |
| 90 | AD_VP | 34000 |
| 110 | AC_ACCOUNT | 8300 |
| 110 | AC_MGR | 12000 |
| | SA_REP | 7000 |

Illegal Queries Using Group Functions

•Any column or expression in the SELECT list that is not an aggregate function must be in

```
SELECT department_id, COUNT(last_name)
FROM employees;
```

```
SELECT department_id, COUNT(last_name)

*

ERROR at line 1:

ORA-00937: not a single-group group function
```

Column missing in the GROUP BY clause

Illegal Queries Using Group Functions

- You cannot use the WHERE clause to restrict groups.
- You use the HAVING clause to restrict groups.
- You cannot use group functions in the WHERE clause.

```
SELECT department_id, AVG(salary)
FROM employees
WHERE AVG(salary) > 8000
GROUP BY department_id;
```

```
WHERE AVG(salary) > 8000

*
ERROR at line 3:
ORA-00934: group function is not allowed here
```

Cannot use the WHERE clause to restrict groups

Restricting Group Results with the HAVING Clause

- •When you use the HAVING clause, the Oracle server restricts groups as follows:
 - 1. Rows are grouped.
 - 2. The group function is applied.

3. Groups matching the HAVING clause are

```
SELECT column, group_function
FROM ISP ave 1:

[WHERE condition]

[GROUP BY group_by_expression]

[HAVING group_condition]

[ORDER BY column];
```

Using the HAVING Clause

```
SELECT department_id, MAX(salary)
FROM employees
GROUP BY department_id
HAVING MAX(salary)>10000;
```

| DEPARTMENT_ID | MAX(SALARY) |
|---------------|-------------|
| 20 | 13000 |
| 80 | 11000 |
| 90 | 24000 |
| 110 | 12000 |

Using the HAVING Clause

```
SELECT job_id, SUM(salary) PAYROLL
FROM employees
WHERE job_id NOT LIKE '%REP%'
GROUP BY job_id
HAVING SUM(salary) > 13000
ORDER BY SUM(salary);
```

| JOB_ID | PAYROLL |
|---------|---------|
| IT_PROG | 19200 |
| AD_PRES | 24000 |
| AD_VP | 34000 |

Nesting Group Functions

Display the maximum average salary:

```
SELECT MAX(AVG(salary))
FROM employees
GROUP BY department_id;
```

```
MAX(AVG(SALARY))
19333.3333
```

Summary

- In this lesson, you should have learned how to:
 - Use the group functions COUNT, MAX, MIN, and AVG

```
FROMWrite oueries that use the GROUP BY clause
[WHERE condition]
[GROUP BY group_by_expression]
[HAVING group_condition]
[ORDER BY column];
```

Practice 4: Overview

- •This practice covers the following topics:
 - Writing queries that use the group functions
 - Grouping by rows to achieve more than one result
 - Restricting groups by using the HAVING clause
